

# 7.1.19 Release Notes

## Bug Fixes

- Fixed an issue where the site timeout feature was causing Users to lose their progress when drafting an email in the New Email Editor without saving.
- Fixed an issue with CRM when saving a campaign draft on a non-Eastern time zone site. The time to send was defaulting back to Eastern time when editing, causing incorrect send times.
- Fixed an issue with CRM Licensed Users receiving an Invalid User error message as if they were unlicensed in certain instances.
- Fixed an issue with Court Reservations when setting up a recurring reservation, the system was not checking for the entire duration of reservations in future weeks which was resulting in some cases of double bookings. Users will now receive a warning notifying them of the booking conflict, and that the recurrence cannot be booked, shown here.

- Fixed an issue with Reservations dropdown styling where the background was shorter than the content within, leaving the bottom options "floating".
- Fixed an issue where the Court Reservations Court Utilization Report was not running regularly. This report shows overall usage of courts in a given time range and date range. The report was empty for some clubs because it was previously running irregularly and is now running nightly, producing data for all court systems.
- Fixed an issue with Website Menu Detail Statistics and Site Sessions not Logging.
- Fixed an issue with iOS Mobile App calendar event descriptions. Event descriptions that contain line breaks were not showing up.
- Fixed an issue with the Mobile App logout module/button not working on iOS when in the Quick Links.
