Overview

Photo Albums are highly customizable, allowing for various visual integrations. They have a simple interface for typical uses and a more advanced interface for custom HTML and snippets.

Use Case(s)

The most typical use is a thumbnail or carousel style gallery to highlight previous events or member spotlights. One very powerful use is linking to events via event flyers, allowing for visual cross-promotion.

Accessing the Tool

Click the 'hand holding a napkin' icon to access the **settings**. This will usually be to the top right of the **Photo Album** on the page.

There are no Categories or Images assigned to this album

This will launch the **Photo Album Settings Interface**.

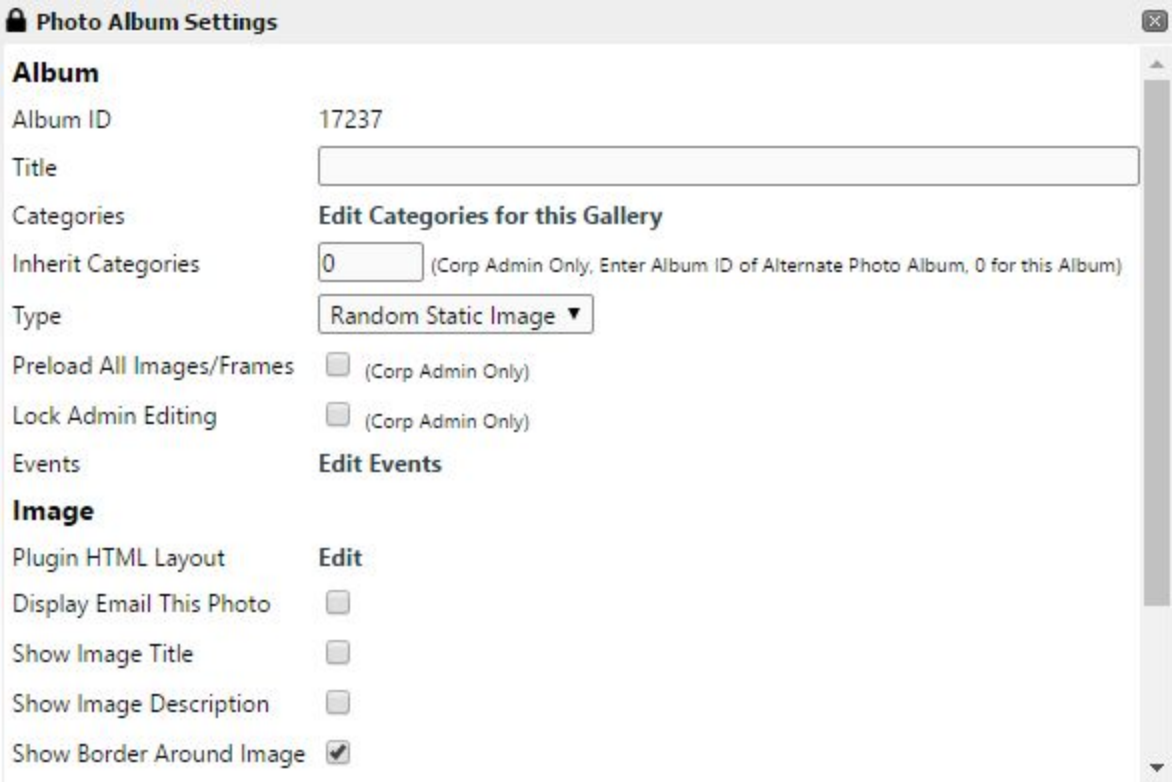

A screenshot of the 'Photo Album Settings' interface. The window title is 'Photo Album Settings'. It is divided into sections: 'Album', 'Image', and 'Events'. Under 'Album', there are fields for 'Album ID' (17237), 'Title' (empty), 'Categories' (with a link to 'Edit Categories for this Gallery'), 'Inherit Categories' (0, with a note '(Corp Admin Only, Enter Album ID of Alternate Photo Album, 0 for this Album)'), 'Type' (Random Static Image), 'Preload All Images/Frames' (checkbox), and 'Lock Admin Editing' (checkbox). Under 'Image', there are checkboxes for 'Display Email This Photo', 'Show Image Title', 'Show Image Description', and 'Show Border Around Image' (checked). Under 'Events', there is a link to 'Edit Events'. A vertical scrollbar is on the right side of the settings panel.

Settings Overview

General Settings

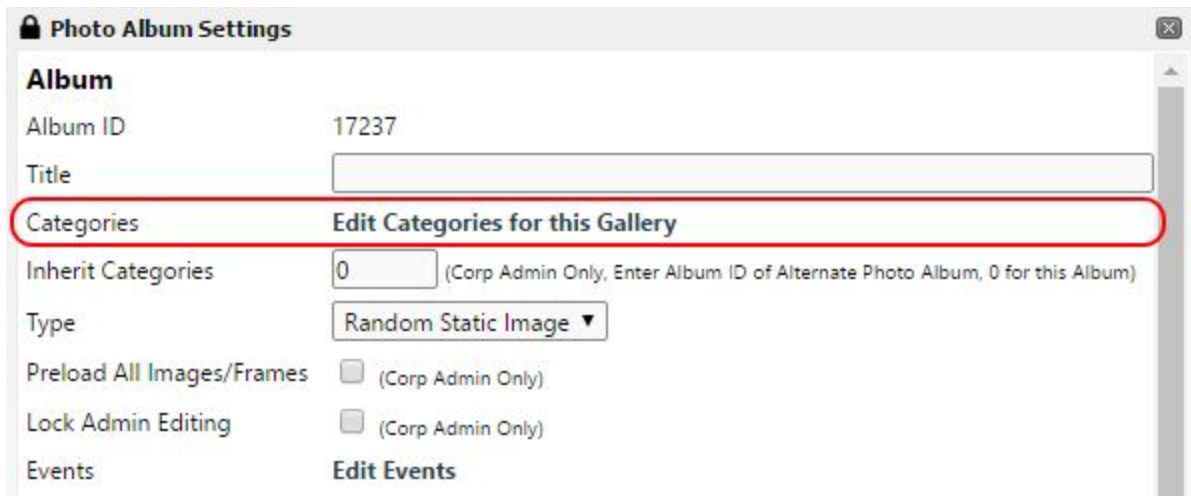

Save: When you're finished making changes, remember to save before closing.

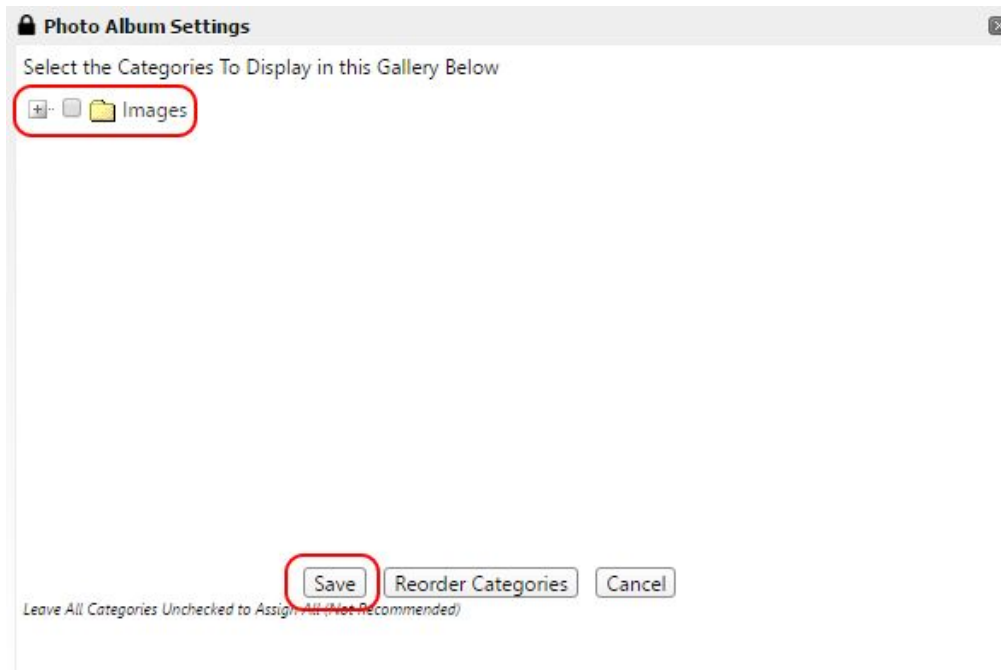

Title: Displays above the gallery. Not a required field.

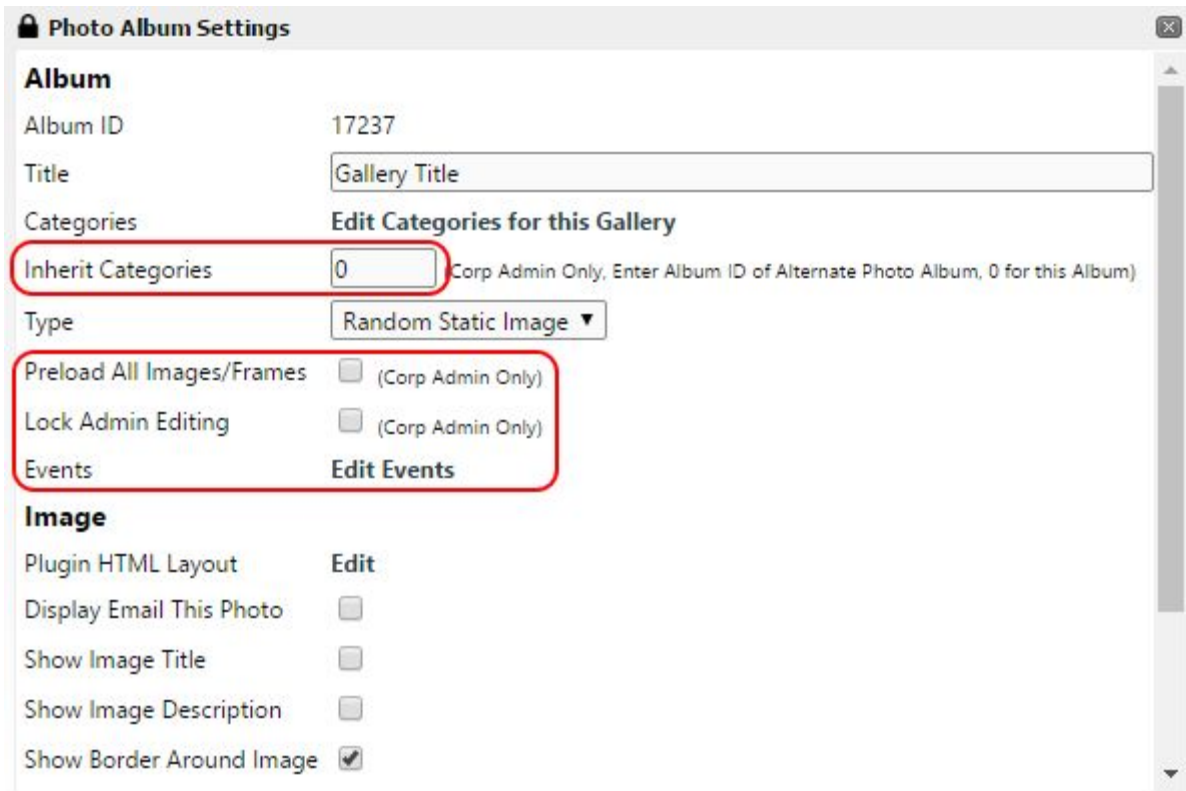

Categories: Specifies the folder(s) from which images are populated into the gallery. Multiple folders can be selected.

Edit Categories for this Gallery: Opens up the folder view of Image Explorer. Use Image Explorer to modify images and folders. Check any folder(s) you want included and click Save.

Events: Allows custom code integration during various transitions. Very advanced and generally unused.

The screenshot shows the 'Photo Album Settings' window. It is divided into two main sections: 'Album' and 'Image'. The 'Album' section contains the following fields and options:

- Album ID:** 17237
- Title:** Gallery Title
- Categories:** Edit Categories for this Gallery
- Inherit Categories:** 0 (Corp Admin Only, Enter Album ID of Alternate Photo Album, 0 for this Album)
- Type:** Random Static Image
- Preload All Images/Frames:** (Corp Admin Only)
- Lock Admin Editing:** (Corp Admin Only)
- Events:** Edit Events

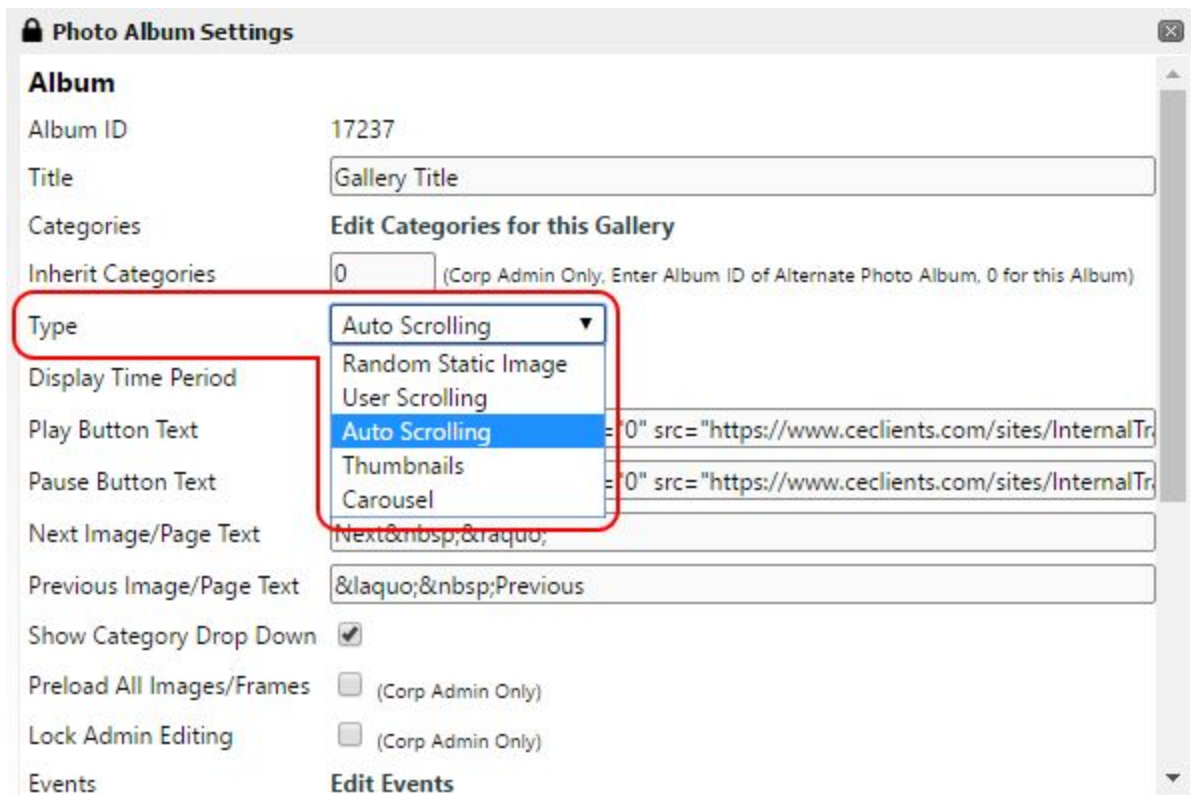

The 'Image' section contains the following options:

- Plugin HTML Layout:** Edit
- Display Email This Photo:**
- Show Image Title:**
- Show Image Description:**
- Show Border Around Image:**

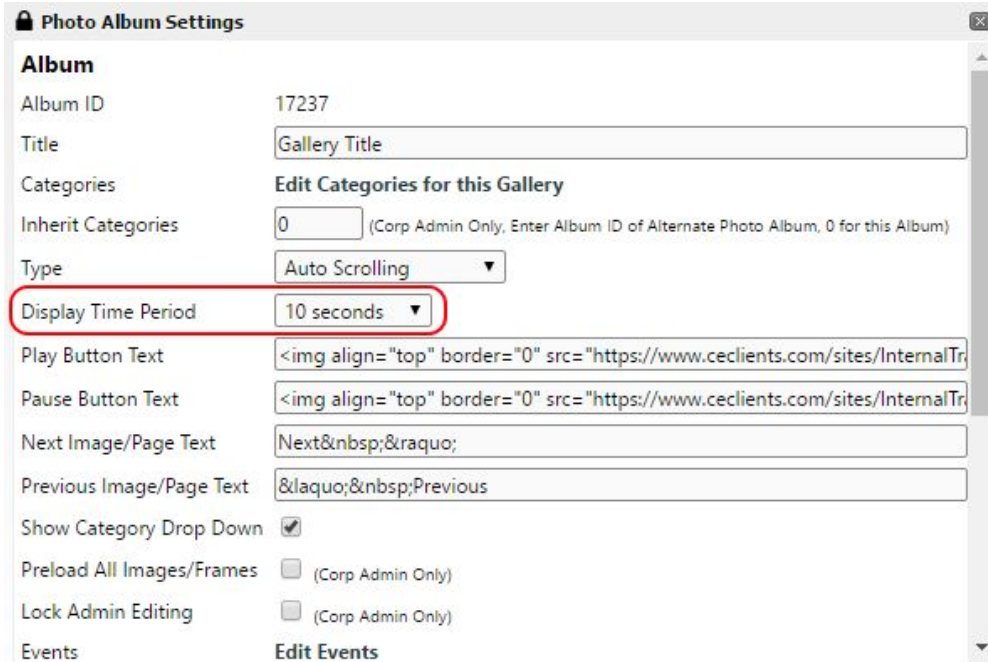

A red box highlights the 'Inherit Categories', 'Preload All Images/Frames', 'Lock Admin Editing', and 'Events' fields.

Type: settings for the type of photo album layout, such as: **Random Static Image, User Scrolling, Auto Scrolling, Thumbnails, or Carousel.**

- **Random Static Image:** Single random image that only changes on page reload. Rarely used.
- **User Scrolling:** Single full sized images with user ability to scroll through them. Rarely used.
- **Auto Scrolling:** Same as User Scrolling but with a timer and optional play/pause buttons. Often used as page headers.
- **Thumbnails:** Same as User Scrolling but with a thumbnail display for quick jumping. Can be modified in many ways. The most common type for event photo viewing.
- **Carousel:** Similar to Thumbnails but with different settings like auto scrolling. Somewhat used.

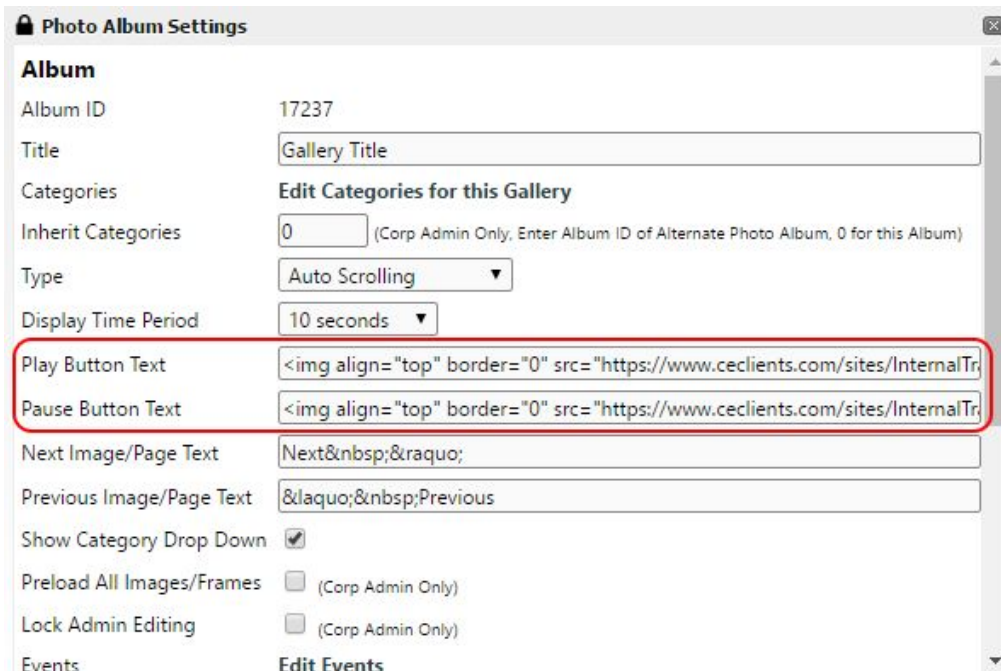

Display Time Period: Determines the length of time between image transitions for auto scrolling galleries.

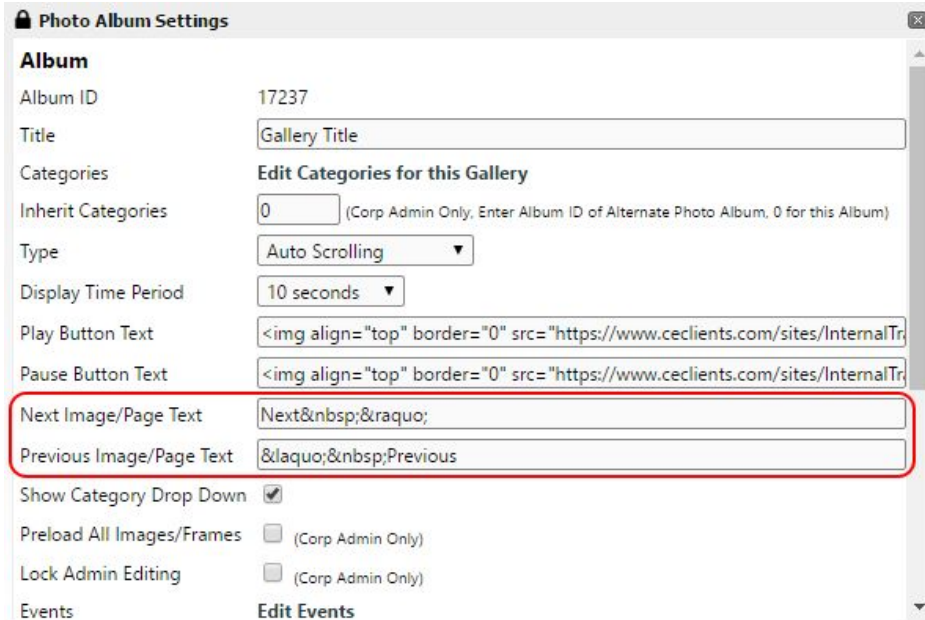

The screenshot shows the 'Photo Album Settings' dialog box. The 'Album' section is expanded. The 'Display Time Period' field is highlighted with a red circle and set to '10 seconds'. Other fields include Album ID (17237), Title (Gallery Title), Categories (Edit Categories for this Gallery), Inherit Categories (0), Type (Auto Scrolling), Play Button Text, Pause Button Text, Next Image/Page Text, Previous Image/Page Text, Show Category Drop Down (checked), Preload All Images/Frames (unchecked), Lock Admin Editing (unchecked), and Events (Edit Events).

Play & Pause Button Text: Has a default value. Specifies text or images used for these buttons for auto scrolling galleries.

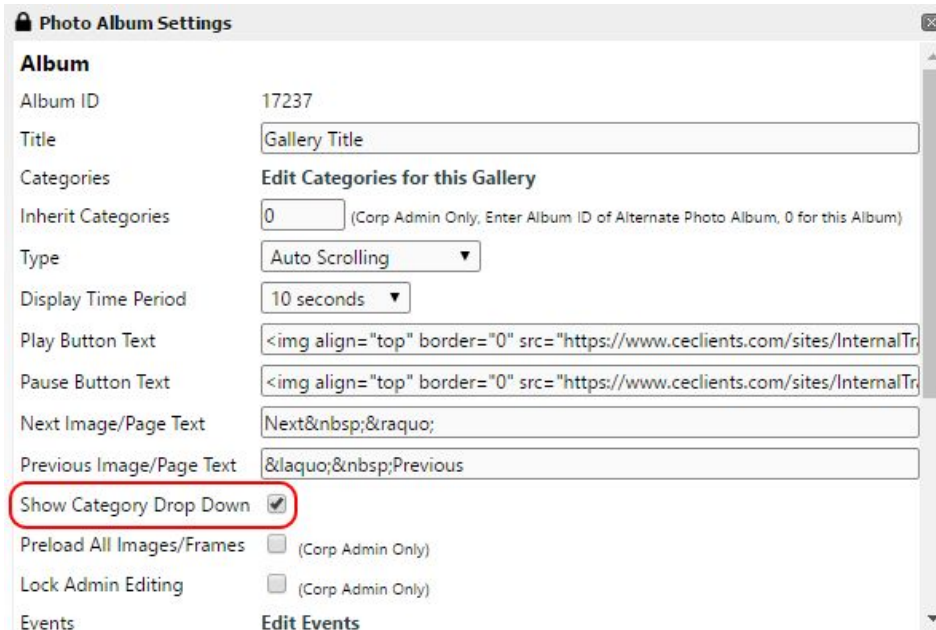

The screenshot shows the 'Photo Album Settings' dialog box. The 'Album' section is expanded. The 'Play Button Text' and 'Pause Button Text' fields are highlighted with a red circle. Both fields contain the same HTML code: `<img align="top" border="0" src="https://www.ceclients.com/sites/InternalTr`. Other fields include Album ID (17237), Title (Gallery Title), Categories (Edit Categories for this Gallery), Inherit Categories (0), Type (Auto Scrolling), Display Time Period (10 seconds), Next Image/Page Text, Previous Image/Page Text, Show Category Drop Down (checked), Preload All Images/Frames (unchecked), Lock Admin Editing (unchecked), and Events (Edit Events).

Previous & Next Image/Page Text: Has a default value. Specifies text or images used for these buttons for scrolling galleries.

The screenshot shows the 'Photo Album Settings' dialog box. The 'Album' section contains the following fields: Album ID (17237), Title (Gallery Title), Categories (Edit Categories for this Gallery), Inherit Categories (0), Type (Auto Scrolling), Display Time Period (10 seconds), Play Button Text, Pause Button Text, Next Image/Page Text (Next »), Previous Image/Page Text (« &Previous), Show Category Drop Down (checked), Preload All Images/Frames (unchecked), Lock Admin Editing (unchecked), and Events (Edit Events). The 'Next Image/Page Text' and 'Previous Image/Page Text' fields are highlighted with a red rectangle.

Show Category Drop Down: When enabled, displays a dropdown selection of categories (folders) the user can choose from. Useful when showing multiple events in the same gallery.

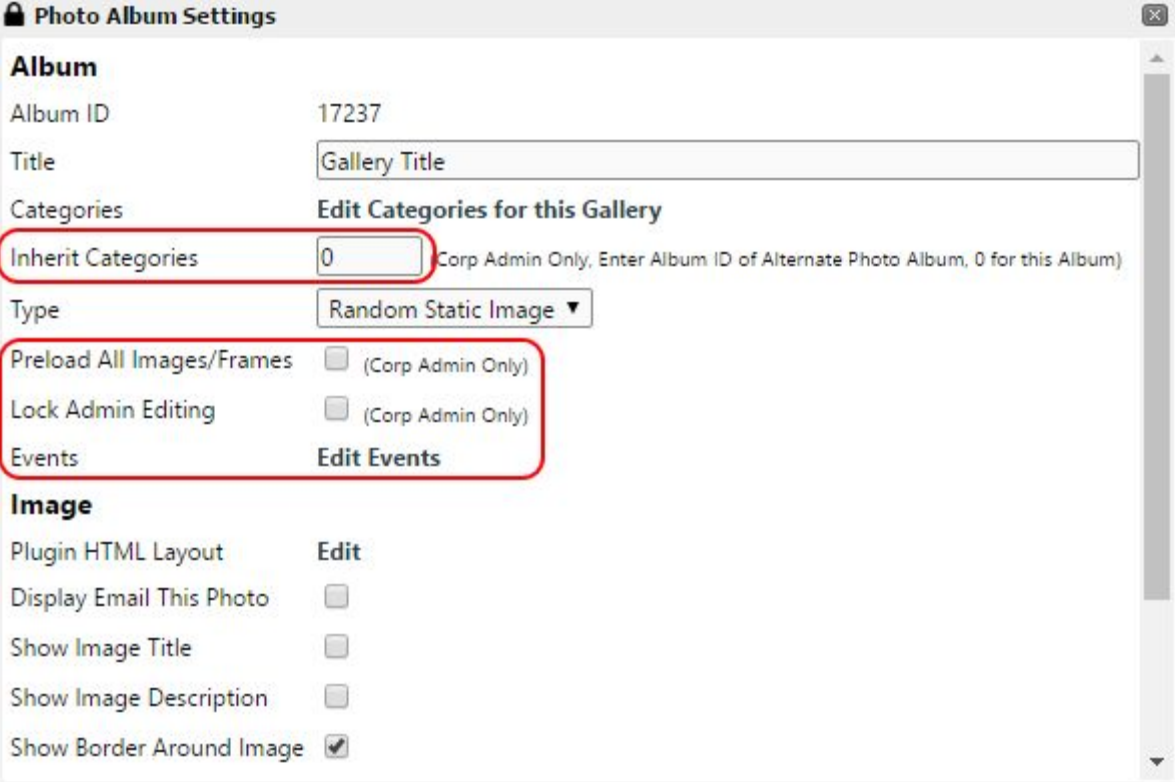

The screenshot shows the 'Photo Album Settings' dialog box. The 'Album' section contains the following fields: Album ID (17237), Title (Gallery Title), Categories (Edit Categories for this Gallery), Inherit Categories (0), Type (Auto Scrolling), Display Time Period (10 seconds), Play Button Text, Pause Button Text, Next Image/Page Text (Next »), Previous Image/Page Text (« &Previous), Show Category Drop Down (checked), Preload All Images/Frames (unchecked), Lock Admin Editing (unchecked), and Events (Edit Events). The 'Show Category Drop Down' checkbox is highlighted with a red rectangle.

Corp Admin Settings Only

Inherit Categories: Use the same image categories as another album.

Preload All Images / Frames: Preload all images rather than during scrolling.

Lock Admin Editing: Prevents club admins from editing the album.

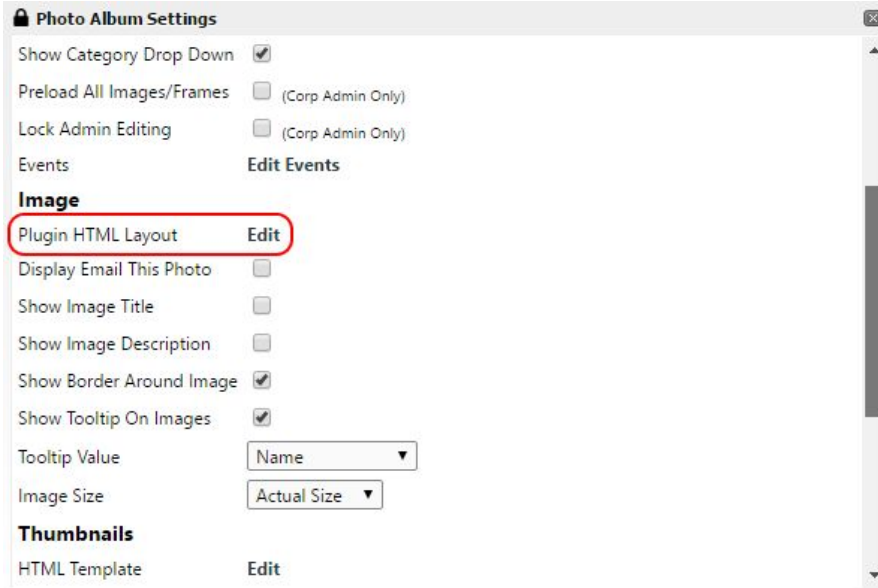

The screenshot shows a window titled "Photo Album Settings" with a close button in the top right corner. The window is divided into several sections:

- Album**
 - Album ID: 17237
 - Title: Gallery Title
 - Categories: **Edit Categories for this Gallery**
 - Inherit Categories: 0 (Corp Admin Only, Enter Album ID of Alternate Photo Album, 0 for this Album)
 - Type: Random Static Image
 - Preload All Images/Frames: (Corp Admin Only)
 - Lock Admin Editing: (Corp Admin Only)
 - Events: **Edit Events**
- Image**
 - Plugin HTML Layout: **Edit**
 - Display Email This Photo:
 - Show Image Title:
 - Show Image Description:
 - Show Border Around Image:

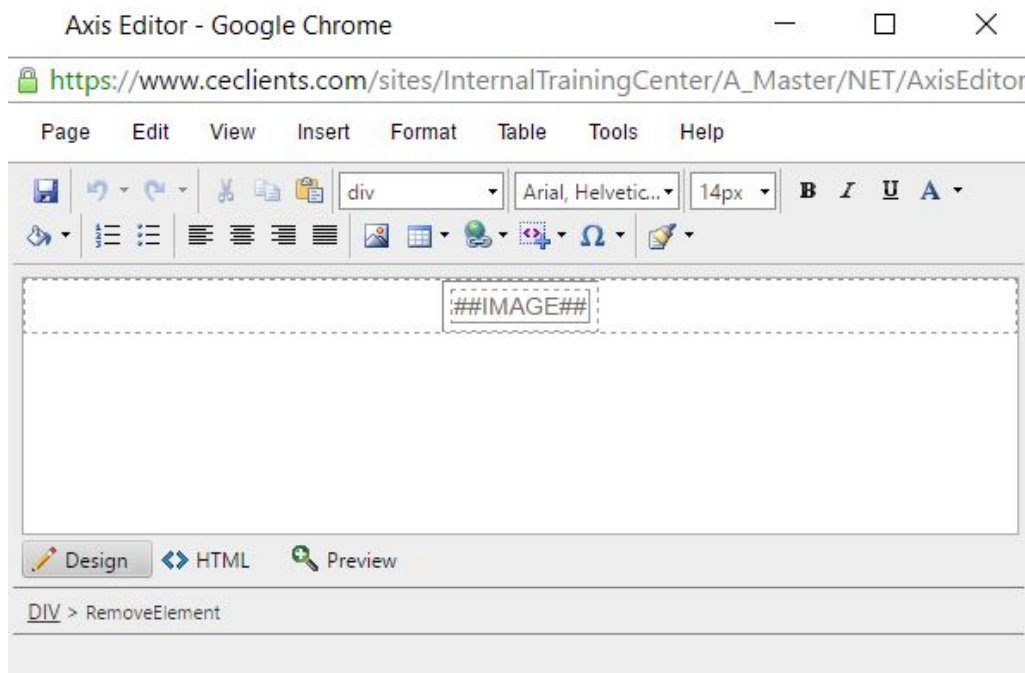

Red boxes in the original image highlight the "Inherit Categories" field, the "Preload All Images/Frames" checkbox, and the "Lock Admin Editing" checkbox.

Plugin Settings

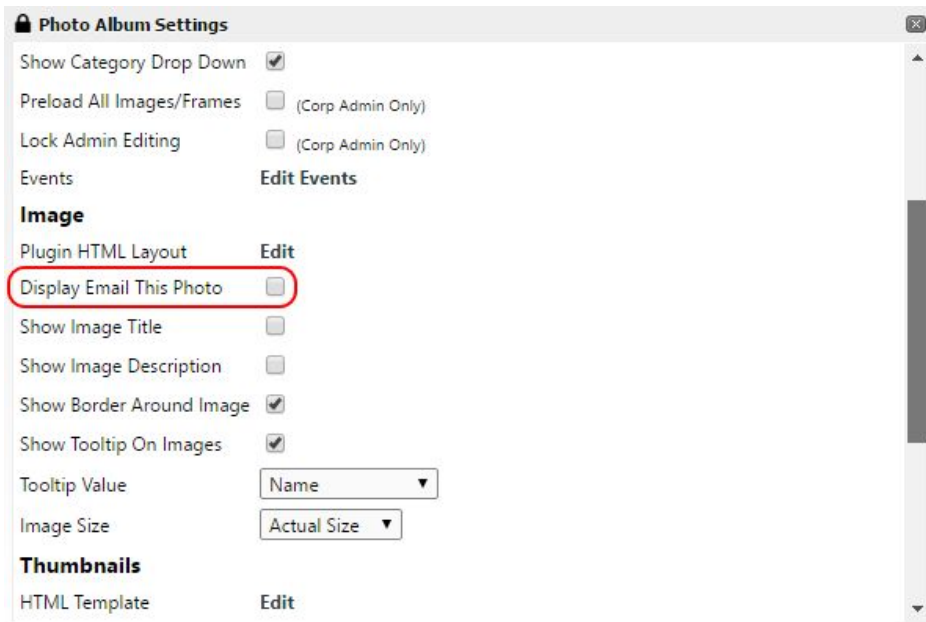

Plugin HTML Layout: open up Editor for customizing the overall plugin display (the 'container').

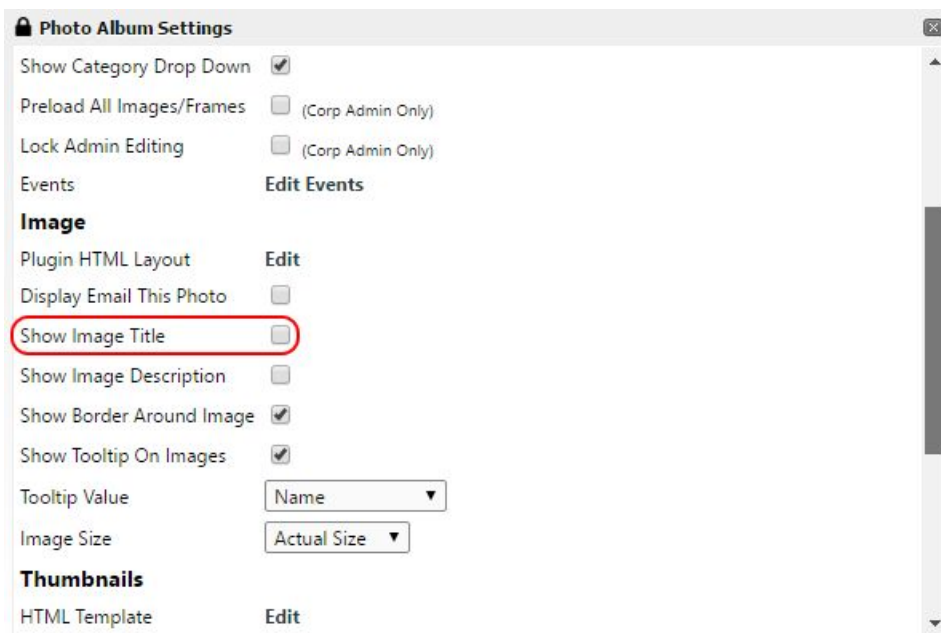

Plugin HTML Layout (Advanced): Editor window for customizing the plugin layout using Snippets and HTML. You can change things like the wrapping of the album, custom borders, transitions, and more. Most of the basic features can be done using built-in options and without the use of this Editor.

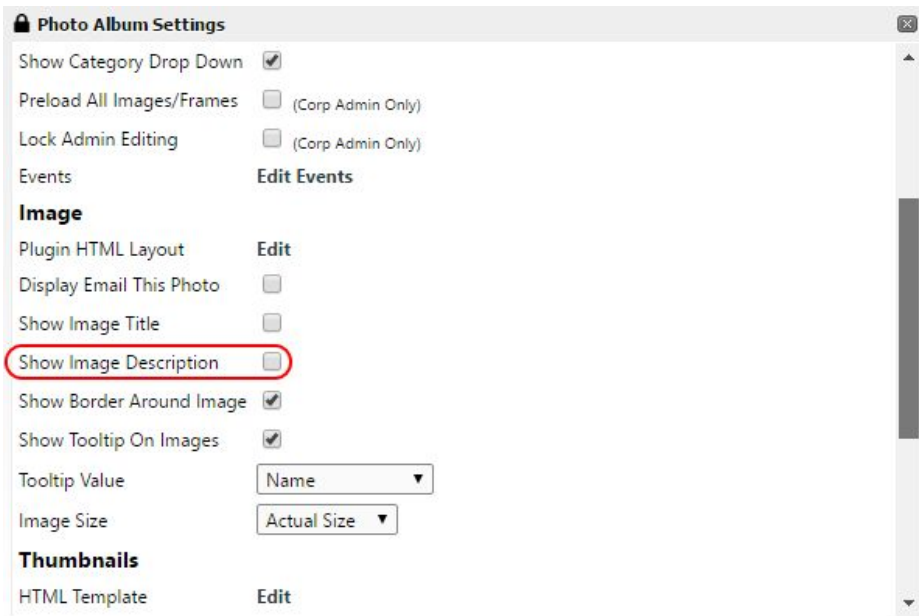

Display Email This Photo: Adds an icon to each image allowing members to email a copy of it. You can choose other members or enter addresses of non-members. Rarely used.

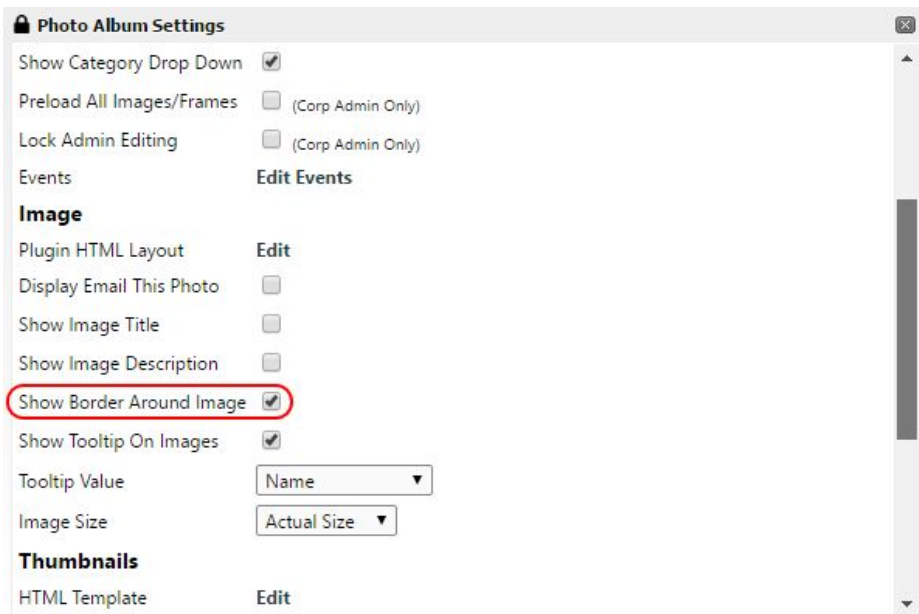

Show Image Title: Adds the ##IMAGETITLE## snippet to the Plugin HTML Layout. This can be positioned and styled by editing the Plugin HTML Layout. The content can be modified in Image Explorer for corresponding images.

Show Image Description: Adds the ##IMAGEDESC## snippet to the Plugin HTML Layout. This can be positioned and styled by editing the Plugin HTML Layout. The content can be modified in Image Explorer for corresponding images.

Show Border Around Image: Creates a border around the image. Default border that can be edited using the Plugin HTML Layout.

Show Tooltip On Images: Shows the tooltip when users hover their mouse over the image.

Tooltip Value: Specifies which tooltip field is displayed. The content can be modified in Image Explorer for corresponding images.

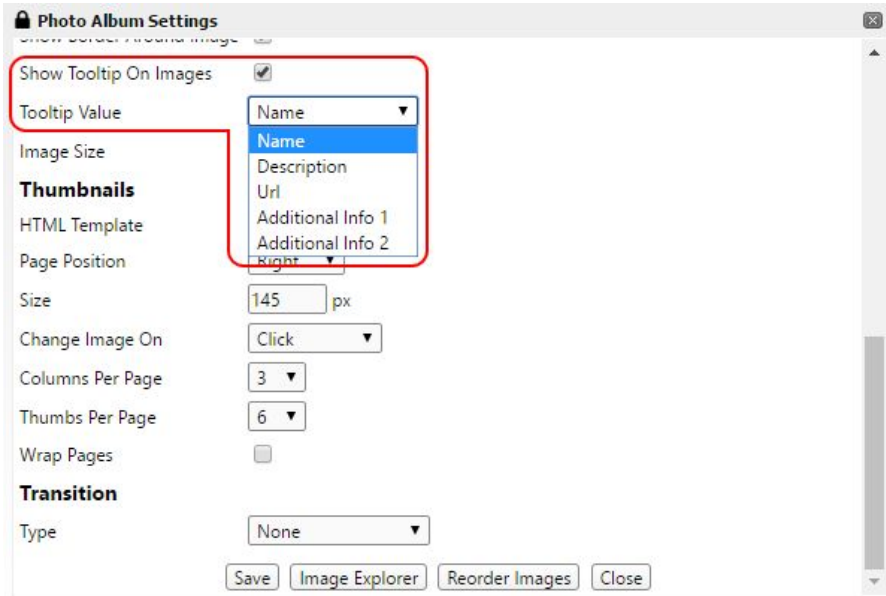

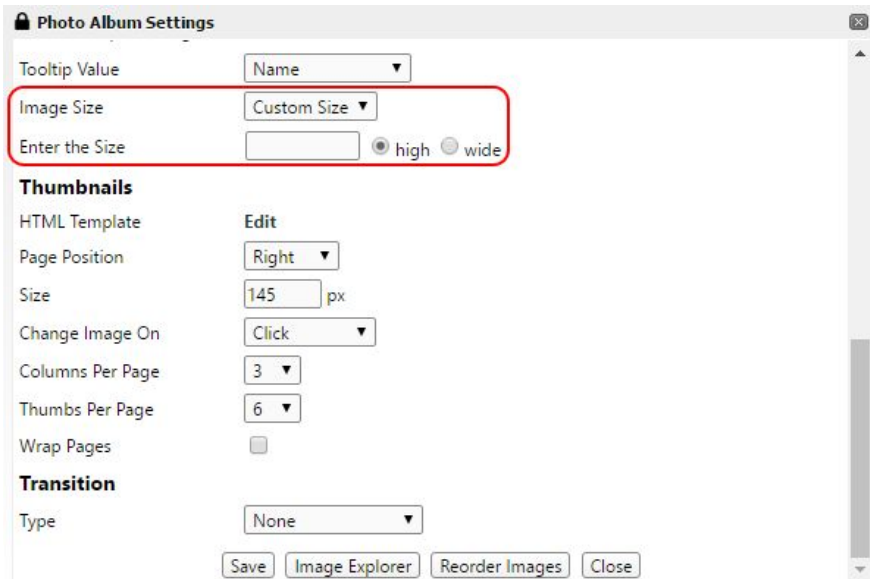

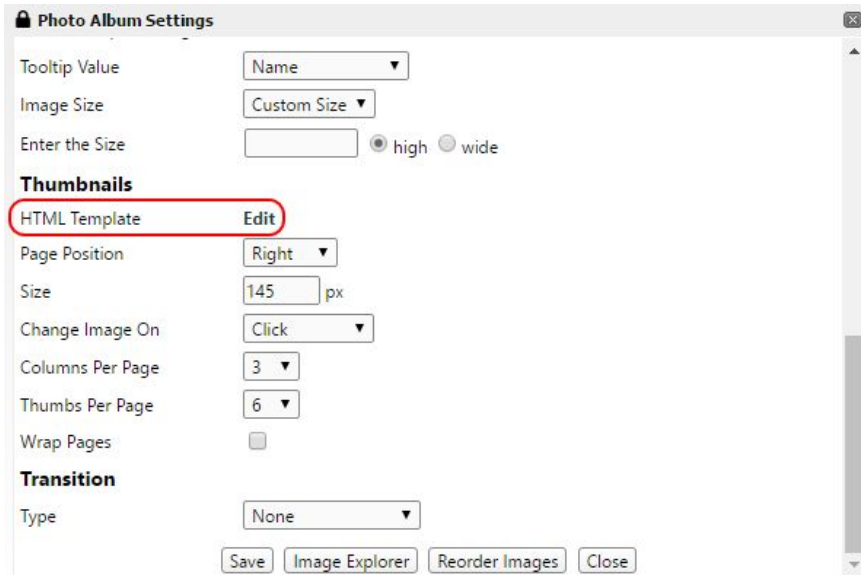

Image Size: Select the image size to be displayed. Options: Actual, Small, Medium, Large, or Custom.

Enter the Size (Optional): Auto-sizes images to either match a specified height or width (but not both to avoid stretching).

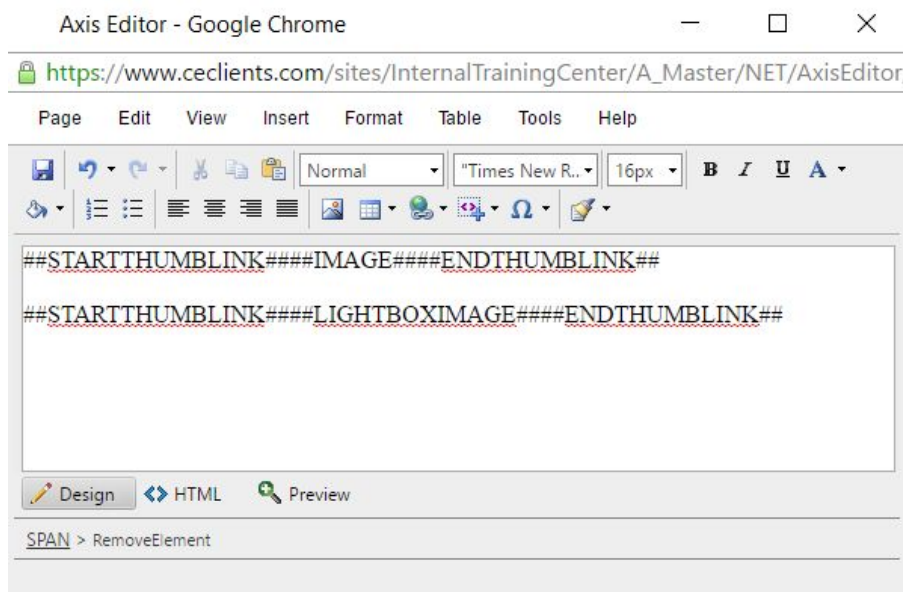

Thumbnail Settings

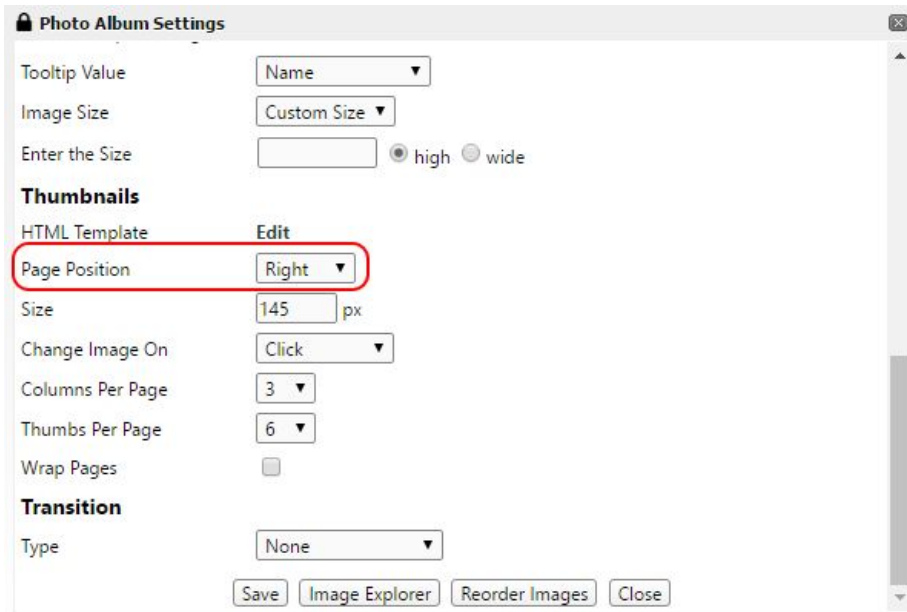

Thumbnail HTML Template: Opens up Editor for customizing the thumbnail display (how individual thumbnails appear).

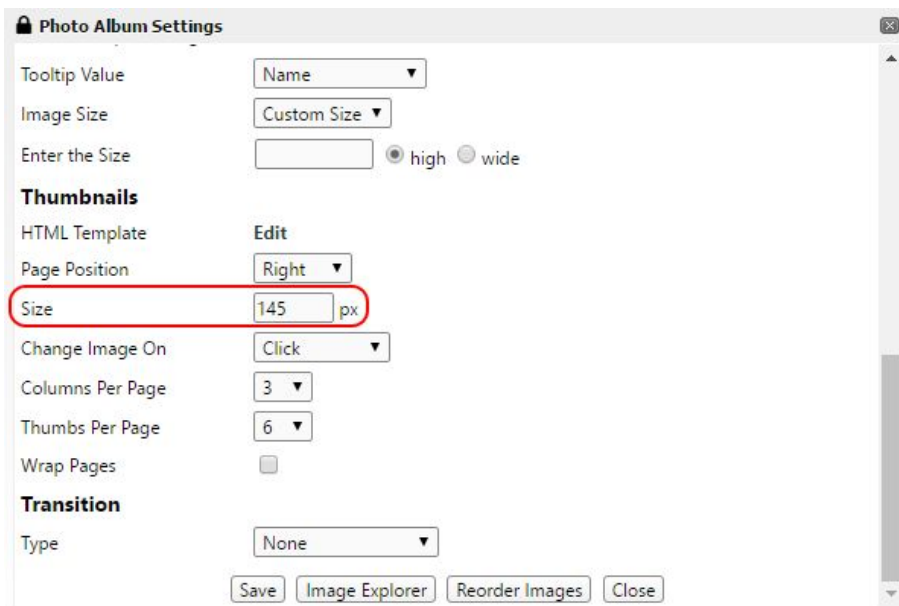

Thumbnail HTML Template (Advanced): Editor window for customizing the thumbnail layout using Snippets and HTML. You can change things like overlays, add hyperlinks to events, and more. The `##LIGHTBOXIMAGE##` snippet is a common replacement for the `##IMAGE##` snippet. This allows for lightbox usage where the image pops up in the center of the screen while everything else is grayed out.

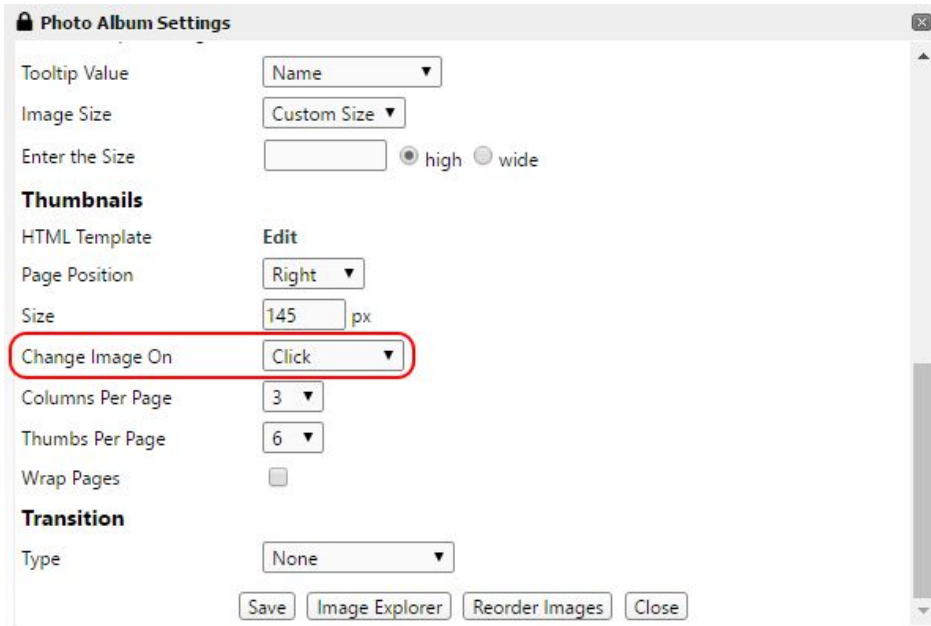

Page Position: Controls the alignment of the thumbnail grid relative to the full image display.

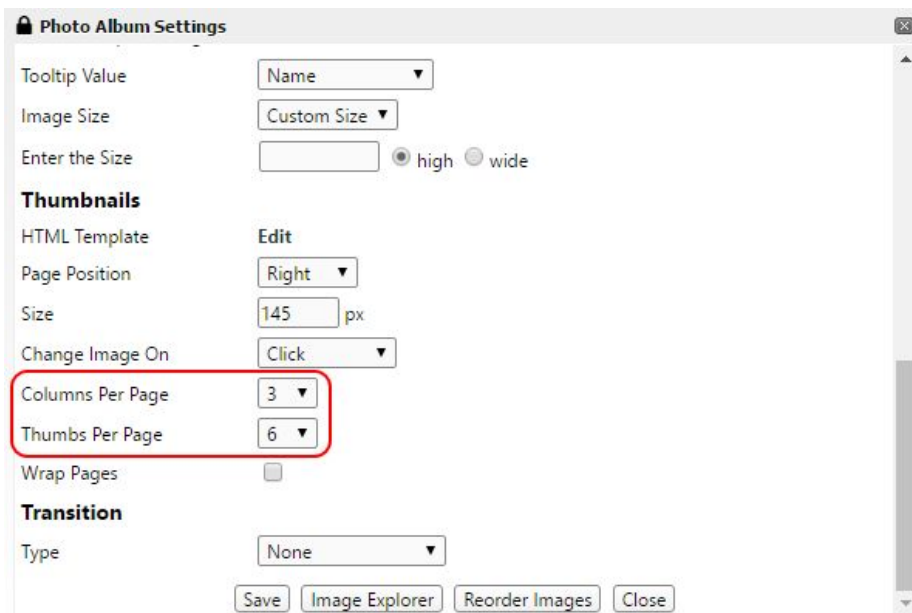

Size: Specifies the thumbnail width only.

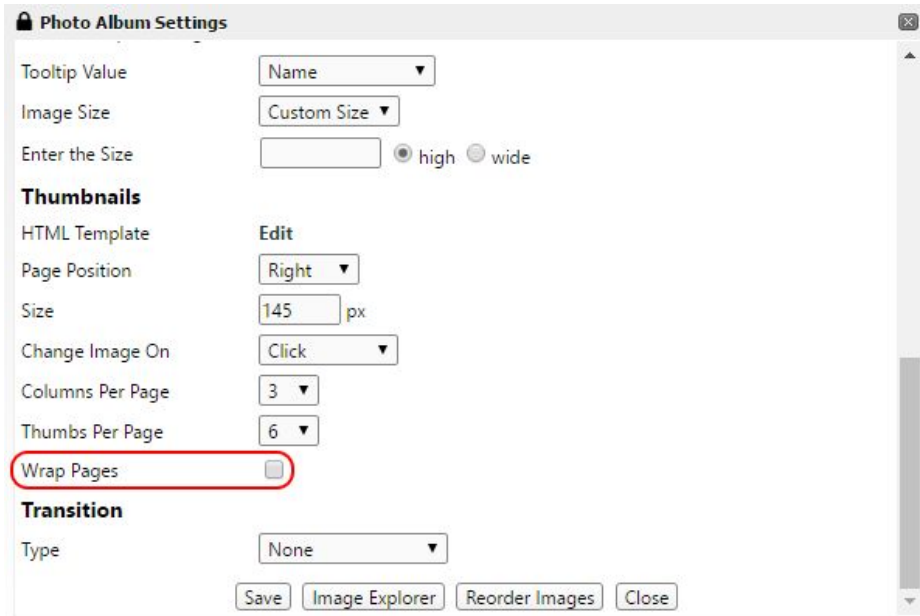

Change Image On: Change image on Click or Mouse Over. Mouse Over is rarely used.

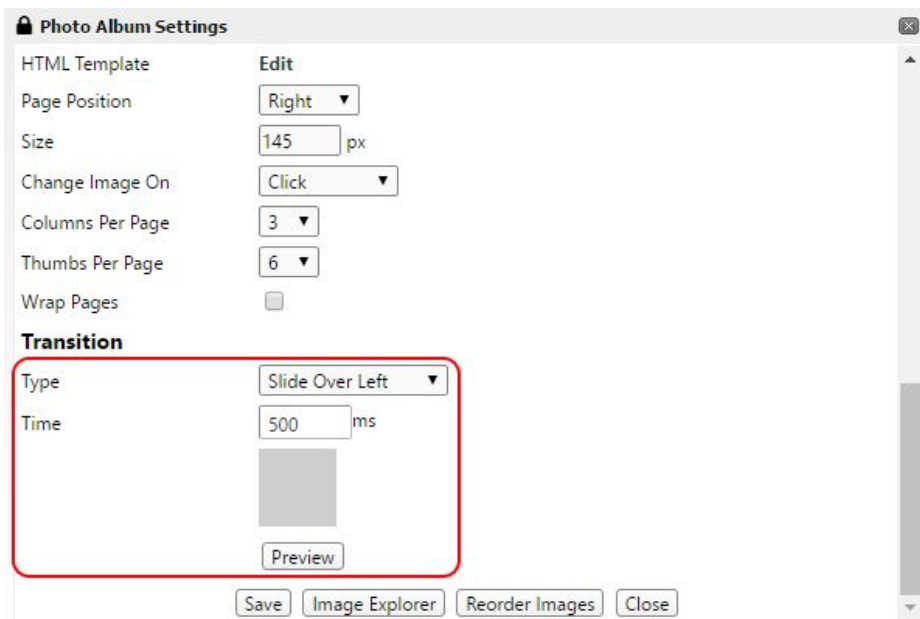

Columns/Thumbs Per Page: Controls the table layout of the thumbnails. 3/6 for example would result in 2 rows of 3 images per page. Left/right arrows exist for browsing additional pages. Thumbs Per Page drop down automatically adjusts to be a multiple of Columns Per Page.

Wrap Pages: When a thumbnail grid is set to display over multiple pages and there are extra spaces on the last page, this places images from the first page of the album on the last page to create a complete grid.

Transition Type/Time/Preview: Specifies the type of transition, time between slides in milliseconds (1000 = 1 second), and provides a Preview button to see a transition effect. None, Fade, and Crossfade are the most common.

FAQs

Q: How do I create a **lightbox** effect?

A: In the **Thumbnail HTML Template**, replace the **##IMAGE## snippet** with **##LIGHTBOXIMAGE##**.

Q: How do I add a **Category dropdown** so I can display multiple event photo sets in a single album?

A: Check the **'Show Category Drop Down'** box in **general settings**, or in the **Plugin HTML Layout** add the **##CATEGORIESDROP## snippet**.

Best Practices

1. For banners/events on the home page, make sure all images are the same size or larger than needed. They can always be sized down, but sizing up causes blurriness and pixelation. Most banners are about 3:1 ratio (width:height).
2. Make sure all images for 'event galleries' are in the same orientation (usually landscape), otherwise the thumbnail grid will appear inconsistent.
3. Structure folders in Image Explorer in a way that makes sense so images are easy to locate. For example, Images/Events/2016/July-4-Cookout is a logical structure.
4. When editing an image in PicMonkey, choose 'save a copy' instead of 'save' in case you don't like the changes and want to revert back to the original.

Bugs (Advanced)

1. PicMonkey does not recognize PNG transparency. You can use a different (free) online image editor when working with images with an Alpha channel:
<https://pixlr.com/editor/>
2. PicMonkey and Windows 10 do not recognize orientation data and will rotate images 'correctly' until they're uploaded. If you run into this, use: <https://pixlr.com/editor/> to open your image and go to Image > Rotate (X) > Save.
