04.03.17 Reservations Releases
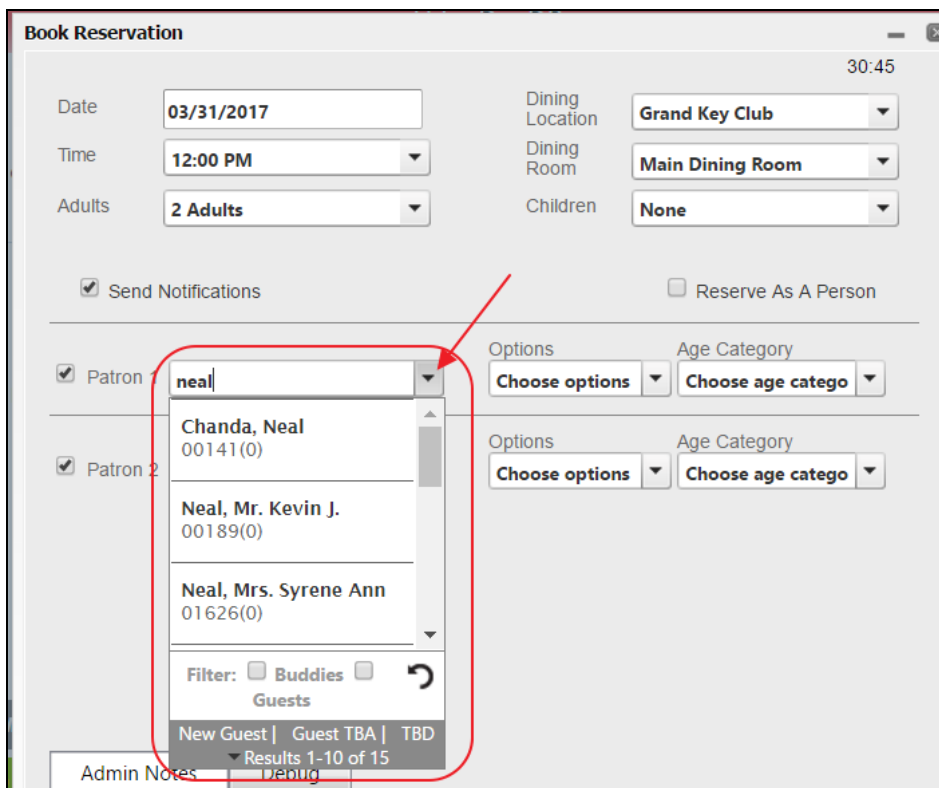

User Guide - Table of Contents

Enhancements

Member Display - Booking Window

- **Added additional display options to dining and activity reservations player dropdown lists to match those available for golf.**

  Use Case: Previously, when selecting a Member to be a part of a reservation (other than Tee Times), only the first and last names were displayed in reservations systems making it difficult to distinguish between two members with the same/similar name. Now, see additional Member details in the dropdown list to more easily identify desired Member in all reservations systems.

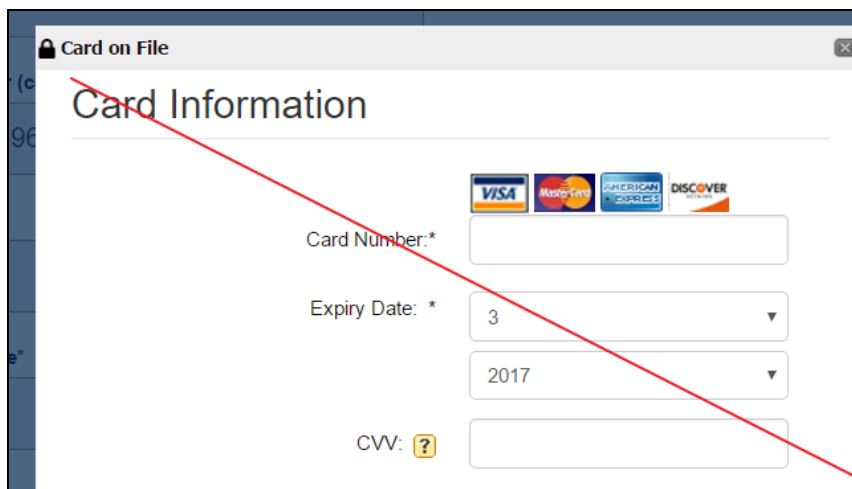

Public Booking Interface

- **As a club admin I can disable credit card entry for Public Booking Tee Time interface.**

  Use Case: For Clubs that allow Public bookings, optionally turn off the credit card requirement for someone booking a tee time. This is a back end setting which requires
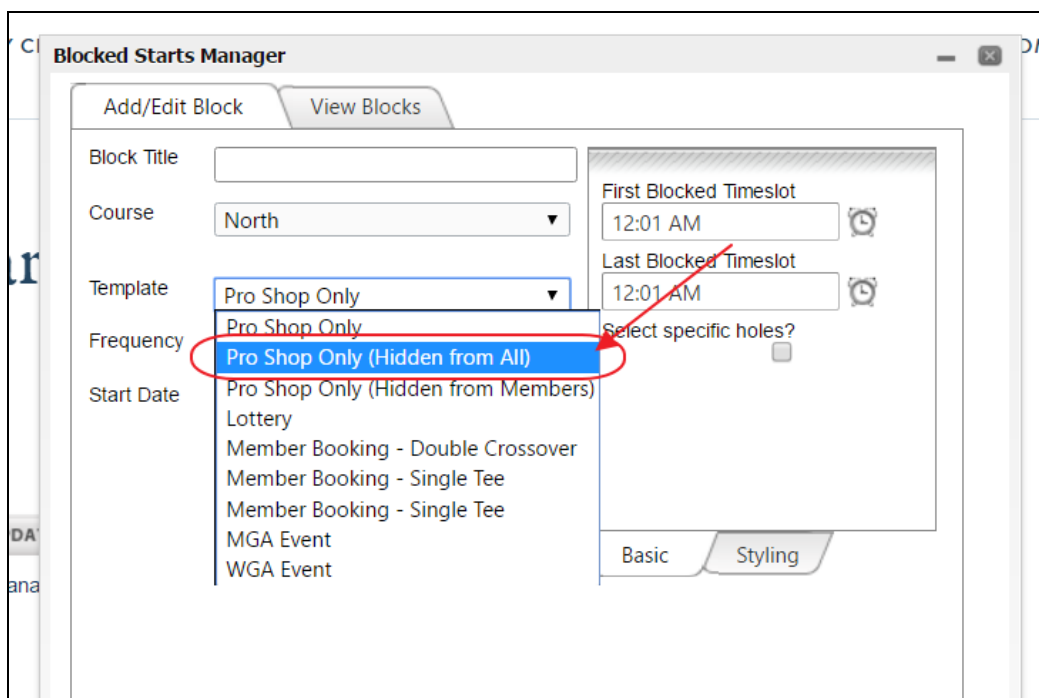

Clubessential's assistance in implementing; however, was not previously possible prior to this enhancement.

Block Starts - Hidden from All

- **Blocks marked as hidden are now hidden from displaying in the app mobile reservations dashboards.**

  Use Case: Previously, blocks using the Hidden from All template were not visible on a Club's website, but were still visible on the Mobile App. With this enhancement, now blocks using the Hidden from all template are also invisible on the Mobile App.

Bug Fixes

- Fixed issue in field for activity reservations that caused a loop when a reservation was moved earlier and remained partially within its reservation duration.

- Fixed issue where options would not display in the edit reservation window for some events in dining reservation system.

- Fixed issue where first unnamed guest in a tee time of all guests would not save on the creation of a tee time booking with public tee times enabled.
