Enhancements

Admin Tools - Dynamic Groups

- Updated date selection drop downs to include a Yesterday option.

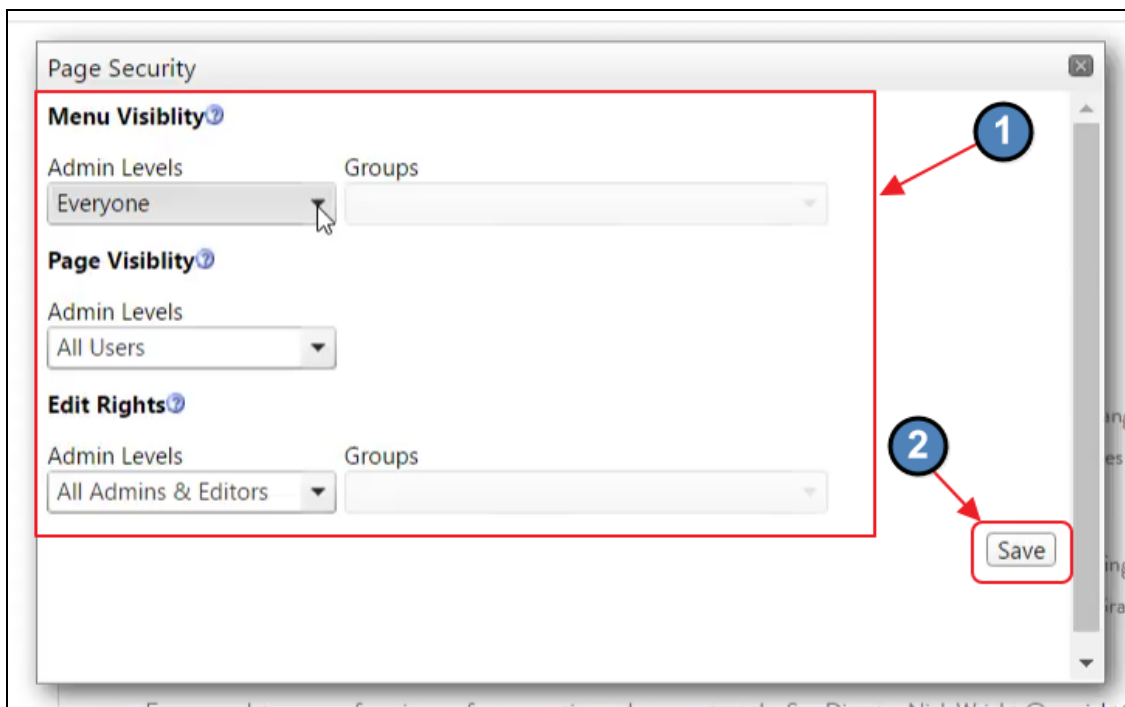

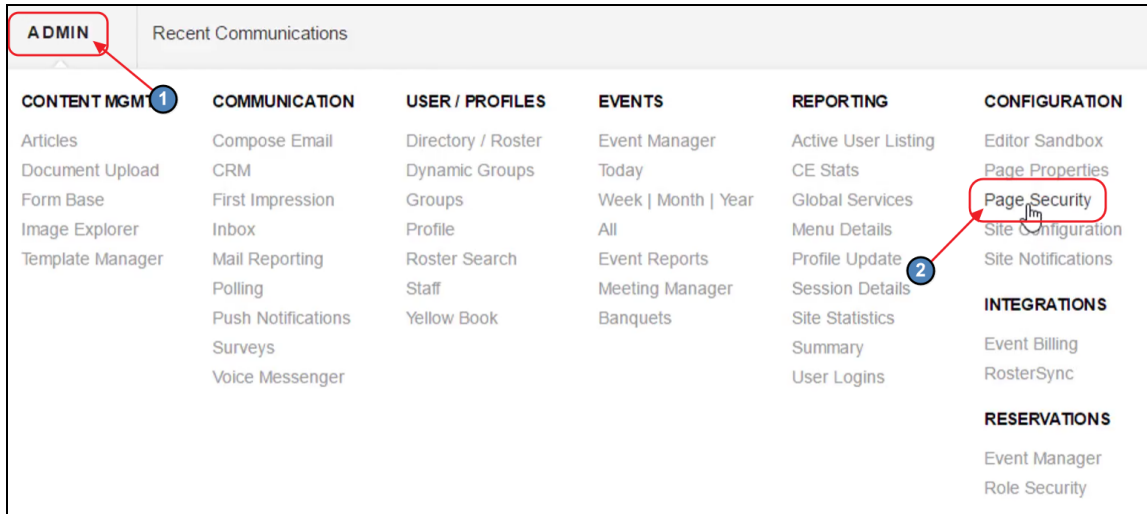

Use Case: Previously, “**Yesterday**” was not an available option for Club Admin’s to choose from in the drop-down of available options when creating Dynamic Group criteria. Therefore, when trying to send out an automated “Welcome to the Club” email to all Members with a Join Date of **Yesterday**, Clubessential Support had to be involved to make this happen. Now, easily create Dynamic Groups using this new available parameter. Click [here](#) to see this new feature in action. Click [here](#) to learn more about Dynamic Groups.

Admin Tools - Page Security

- Updated the system to allow a Club Admin to be able to change a page's security.

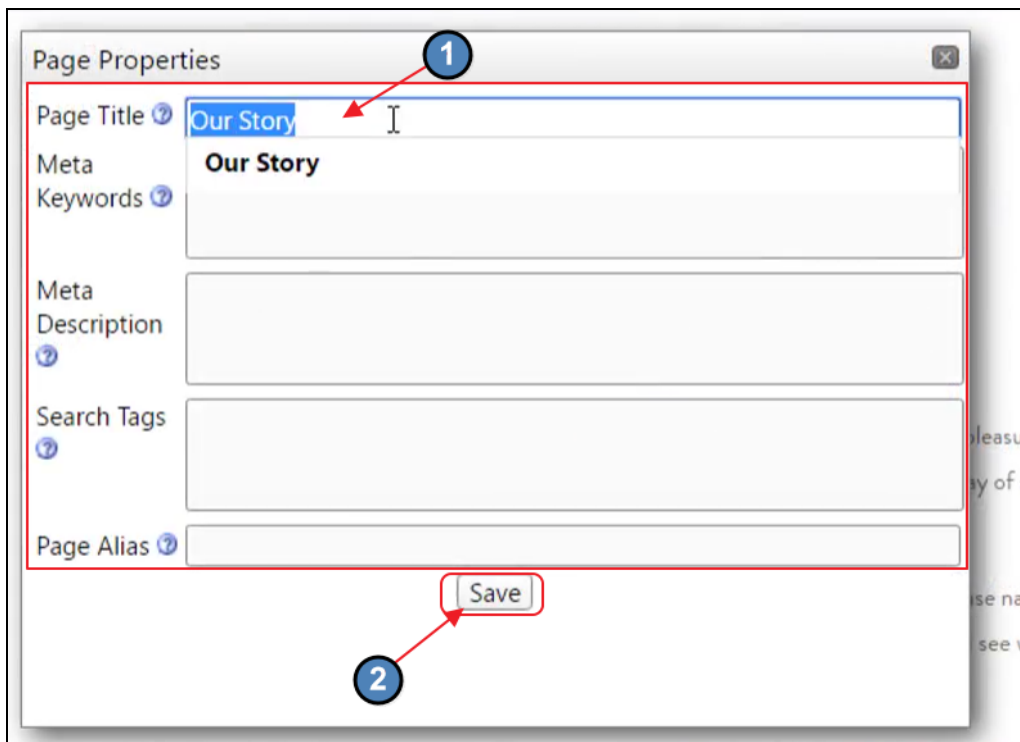

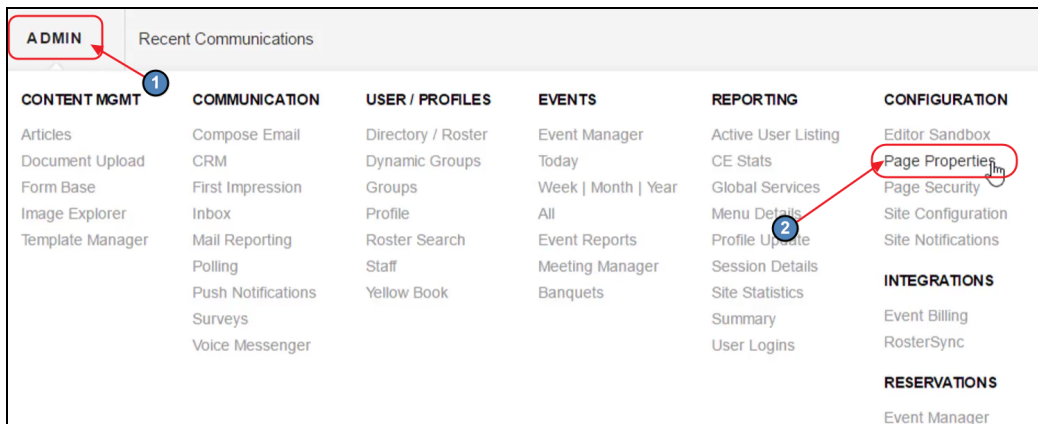

Use Case: Previously, Clubs had to call Clubessential Support when they needed a page hidden, or the security of it adjusted. Now, in the event a Club wants to hide a page from Members, or change who can edit a particular page, easily do so using this new feature.

Admin Tools - Page Properties

- Updated the system to allow a Club Admin to be able to change a page's name.

Use Case: Previously, Clubs had to call Clubessential Support when they needed a page renamed. Now, in the event a Club wants to change a page Title from "Our Story" to "History", easily do so using this new feature.

Click [here](#) to see the Page Security and Page Properties tools in action.

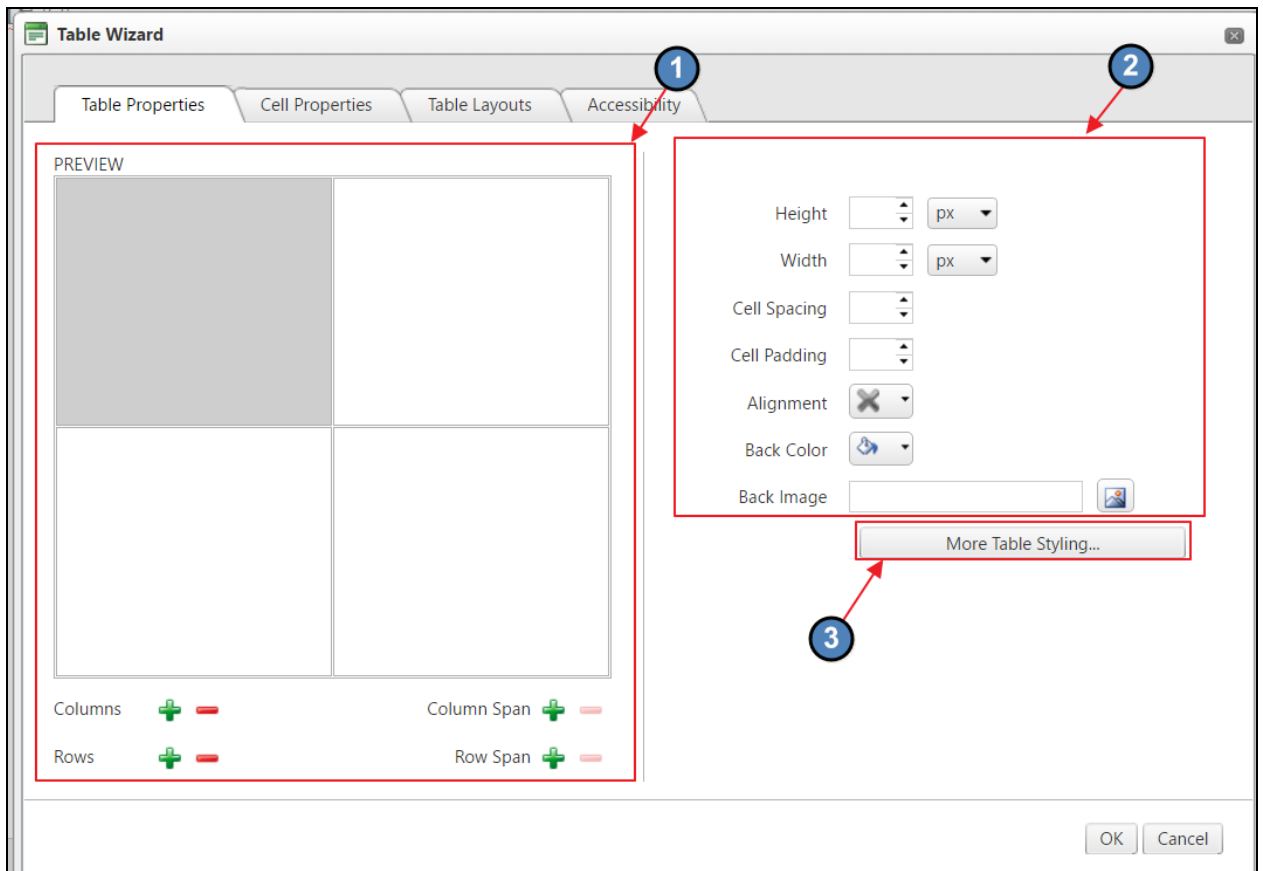

Note: You must still contact Clubessential Support to rename the title for the following types of pages: calendars, online statements, and single sign-on URLs to third-party websites.

Back End - Editor Processing

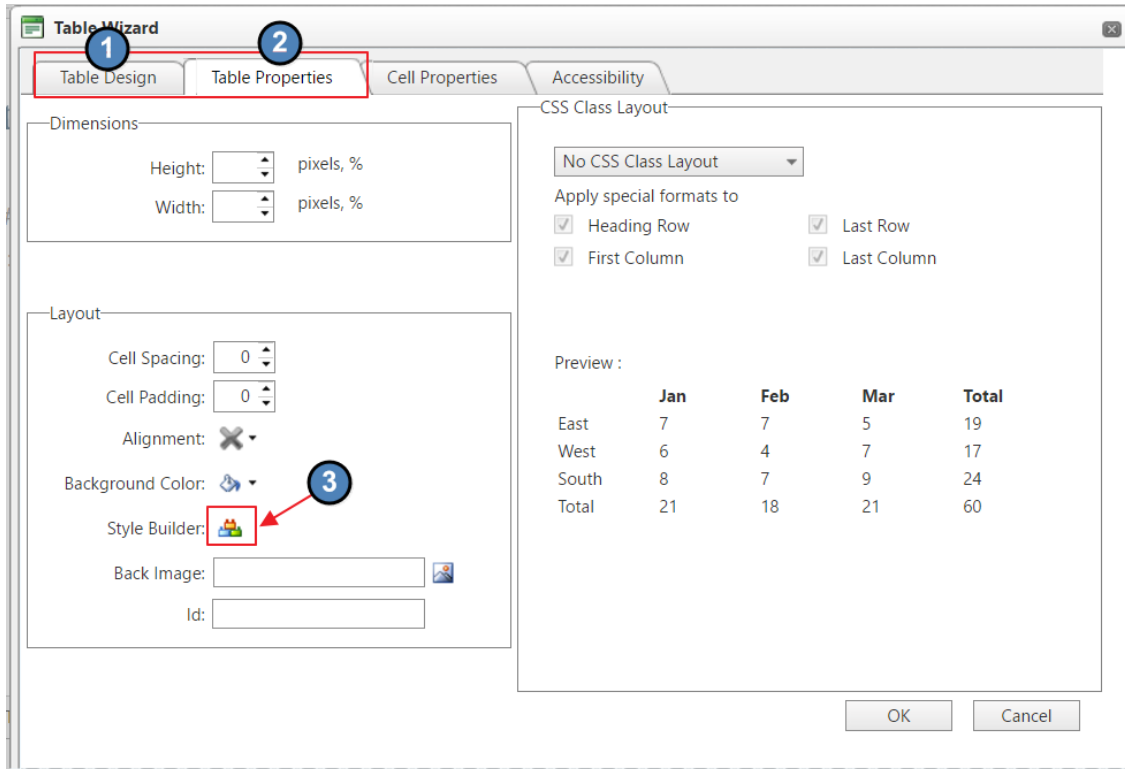

- **Updated Telerik Controls to the latest versions.**

Use Case: As a first step to improve the Editor, upgraded to the latest version of this tool to increase the functionality of it. While no major visible changes will be noticed by users, the back end functioning and translation of HTML is improved resulting in a better user experience. One **minor visible change** has been outlined below. When creating Tables: In Table Properties: Two tabs (Table Design and Table Properties) in the Old Editor have been combined into one tab (Table Properties) in the New Editor, and the Style Builder icon has been replaced with "More Table Styling..." button.

Upgraded Editor:

Previous Version of the Editor

Bug Fixes

- Fixed an issue with field validation for email addresses not properly validating on server side submission.
- Fixed an issue where the ResourceType toggle option on MOSV pages was not working properly.
