03.19.18 Website Release Notes

User Guide - Table of Contents
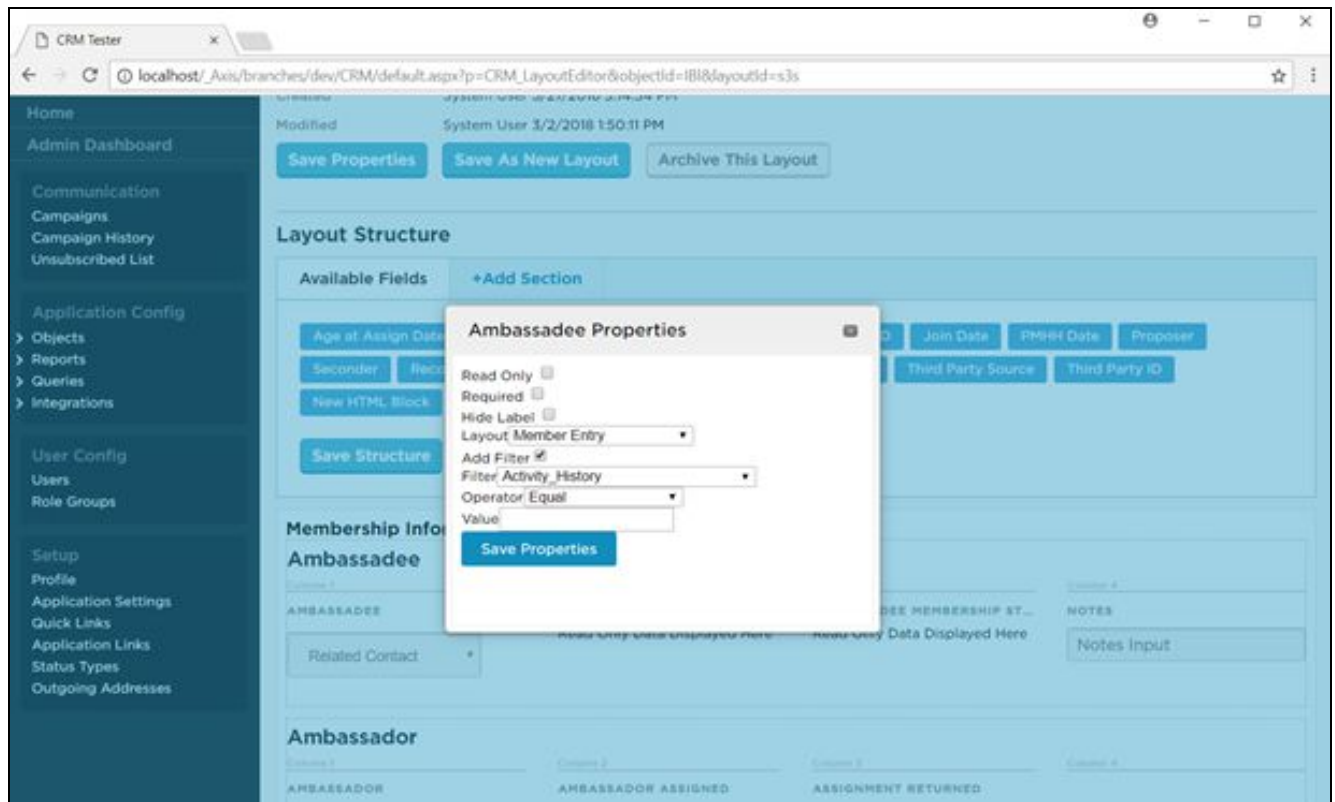

Enhancements

CRM

- **As a CRM User, I would like the system to return and display only relevant data for downdowns populated by a Child/Parent Relationship.**

  Use Case: Previously, the CRM system would return unfiltered results for dropdown populated by a Child/Parent Relationship. Now, the CRM system allows for filtering based on object fields, which equate to column names.

Bug Fixes

- Fixed an issue with POS Ticket and Tee Sheet Integration.

- Fixed an issue with CRM page load performance.

- Fixed an issue with Mobile Website Party Size that prevented guests from being entered.

- Fixed an issue with OMS where there was not sufficient storage space for payments to be stored within the My Statements area.
