Enhancements

CRM

Campaigns - Auto-Save

- **As a CRM User, I would like the CRM system to auto-save my progress while creating a Campaign.**

Use Case: Previously, when users forgot to manually save their progress when creating a CRM Campaign and then navigated away from the screen, the work would be lost. Now, each Next Step button in the CRM Campaign creation process has been configured to auto-save a retrievable draft of the progress.

The screenshot shows a web form titled "Create New Campaign". At the top, there is a breadcrumb trail: "New Campaign > Step 1 - Properties". Below this, the form is titled "Step 1 - Properties". It contains several input fields: "Title" with the value "Test", "Category" (empty), "Description" with the value "Next Step Button Feature", and "Campaign Type" with the value "Select a Campaign Type". At the bottom of the form, there is a blue button labeled "Next Step - Add Targets" which is highlighted with a red rectangular box.

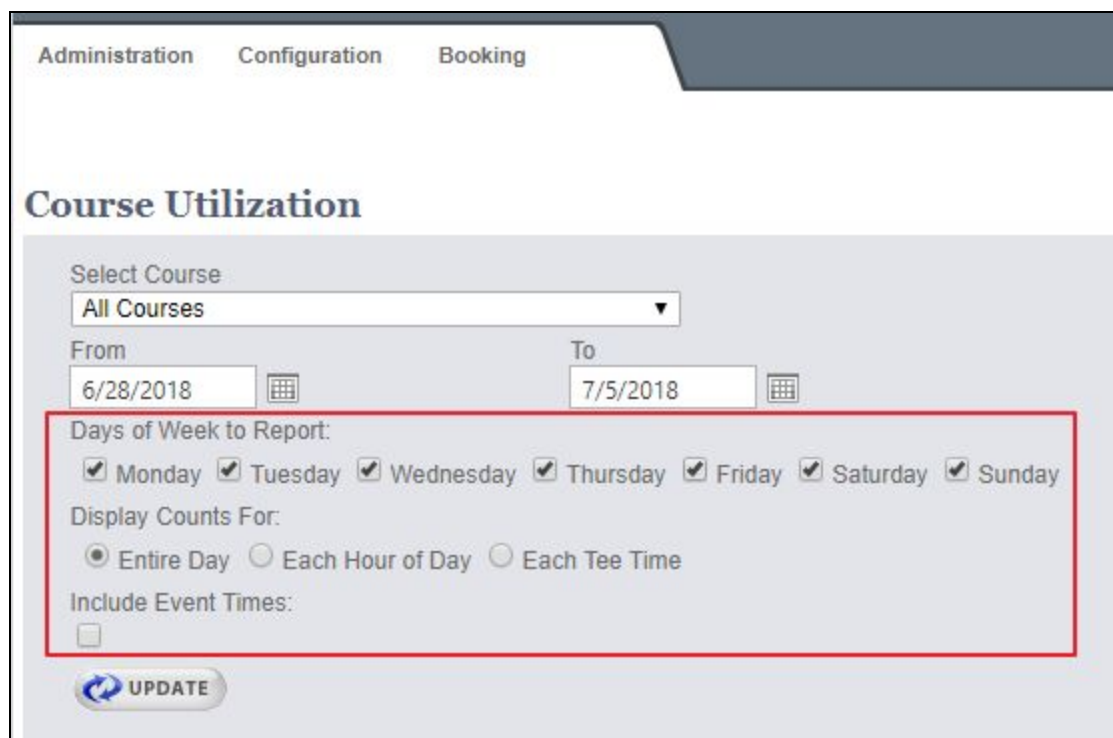

Reservations

Tee Times - Statistics - Course Utilization Report

- **As a Club Admin, I would like increased functionality when filtering our Course Utilization Report.**

Use Case: Previously, the Course Utilization Report only included filters for Course and Date Range. Now, easily find out more information about the course utilization

by using the additional filters on days of the week, time frames to report on, and ability to include or exclude Golf Events.

The screenshot shows a web interface for configuring a report. At the top, there are navigation tabs for 'Administration', 'Configuration', and 'Booking'. Below this is the title 'Course Utilization'. The main form area includes a 'Select Course' dropdown menu currently set to 'All Courses'. Below the dropdown are 'From' and 'To' date fields with calendar icons; 'From' is set to '6/28/2018' and 'To' is set to '7/5/2018'. A red rectangular box highlights the 'Days of Week to Report' section, which contains seven checkboxes, all of which are checked: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday. Below this is the 'Display Counts For' section with three radio button options: 'Entire Day' (selected), 'Each Hour of Day', and 'Each Tee Time'. At the bottom of the highlighted area is the 'Include Event Times' section with an unchecked checkbox. Below the entire form is a blue 'UPDATE' button with a refresh icon.

Bug Fixes

Please Note: Bug Fixes will take effect after the current App has been updated by the User via App Store or Google Play.

- Fixed an issue with Tee Times on Mobile App where Book Now text was incorrectly clickable when times were unavailable.
- Fixed an issue with Dining Events on the Android Mobile App where the Booking Window was opening to the current day instead of the Dining Event.
- Fixed an issue on the Mobile App where Linked Events in the Calendar were only showing the first of the Linked Events.
