

4.6.20 Axis Release Notes

Enhancements

- **Added the new email editor in Tee Times notifications, Court notifications, and Dining notifications.**
Use Case: Users can now access and use the New Clubessential Email Editor to create Custom notifications or edit Default notifications for Tee Times notifications, Courts notifications, and Dining notifications.
- **Added the ability to designate the siteID of a redesigned site.**
Use Case: Added functionality to allow the designation of the siteID during a redesign, so that New Email Editor images carry over to the new site.
- **Added Member Type to the Golf Genius API.**
Use Case: Added Member Type to the Golf Genius API in order for Golf Genius clients to leverage that information when setting up Member events/tournaments in Golf Genius filtered by Member Type.

Bug Fixes

- Fixed an issue that caused held times to display as green instead of gray on the mobile version of the tee times dashboard.
- Fixed an issue that caused CRM child records (notes, related records, etc.) to save improperly when creating CRM records in multiple browser tabs.
- Fixed issues with member GHIN information displaying improperly (wrong date or no data displaying at all).
- Fixed an issue with Event/Payment integration, that caused waitlist bookings to be given a status of Active when booked via the mobile website.
