

5.18.20 Axis Release Notes

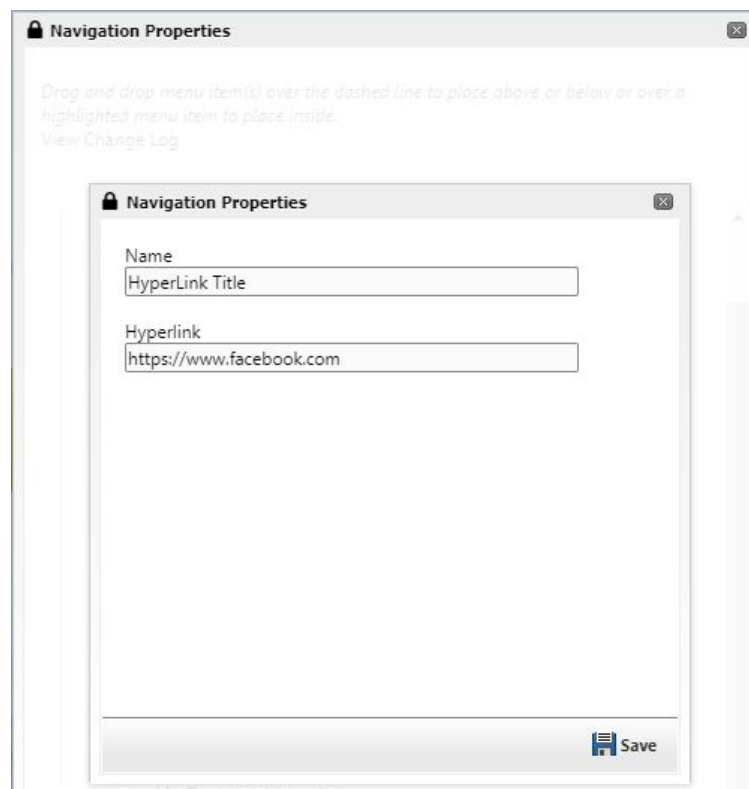

Enhancements

- **Added the new email editor in Articles.**

Use Case: Now, the New Editor is available for use in Articles, so that emails that have been sent from the New Editor can be quickly and easily posted as an article.

- **Added a new editing feature to the Navigation Properties window, which allows editing of navigation item titles and hyperlinks.**

Use Case: Within the Navigation Properties window (which can be opened by clicking the hand icon to the right of the site's navigation), there is now an “Edit” link, which allows for the editing of navigation page titles as well as hyperlink URLs directly from this window. Previously, this window could only be used to reorder navigation items.

- **Added “Lazy Loading” functionality to the new editor template manager.**

Use Case: Previously, the new editor template manager loaded all templates at once, resulting in long load times for clients with a large number of templates. With this update, the template manager will only load the first few visible templates, and incrementally load in new templates as the page scrolls. This significantly improves the performance and responsiveness of the new editor template manager.

Other Features/Bug Fixes

- Fixed an issue that resulted in incorrect clickthrough reporting on the main Mail Reporting listing page.
- Fixed an issue that prevented event-specific snippets from populating in the new editor when editing event notifications.
- Fixed an issue that caused the party size to display incorrectly on the mobile/app view of the court reservation system.
- Fixed an issue that prevented tee time payment statuses from being reported correctly after deleting tickets from POS.
