

7.20.20 Axis Release Notes

Enhancements

- **Created a `##RESOURCE_TIMESLOTHEADCOUNT##` snippet for Family Fun Pack Reservations Systems**

Use Case: Family Fun Pack systems are built as one resource with multiple timeslots permitting sign ups (ex: 11 am, 2 pm, 5 pm, etc.). By adding the `##RESOURCE_TIMESLOTHEADCOUNT##` snippet under the Total Headcount for Day (`##TOTALHEADCOUNT##`), admins will easily be able to see how many people are signed up for each reservation timeslot.

Other Features/Bug Fixes

- Fixed an issue in Dining Reservations/Pool Reservations that was allowing Guests to be added to the reservation on Edit, even when guests were not permitted to be included as part of the reservation based on the rules.
- Fixed an issue where the Duration Dropdown was not displaying on Mobile/App for Tennis and Golf Lessons reservations.
- Fixed an issue where the Court Reservation/Pool Reservation system was displaying incorrect duration options when the schedule has gaps.
- Fixed an issue that prevented the editing of Article Mobile Content on new articles.
- Fixed an issue in Dining Reservations/Pool Reservations where users were able to edit their reservation into a timeslot that would exceed the max headcount for that timeslot.
- Fixed an issue that caused duplicate entries in the snippet listing when editing event notifications
- Fixed an issue for tee times clients using our 3rd party accounting integration where the individual dollar sign for each player was not properly displaying green for those who had already paid/had transactions committed.

- Fixed an issue for tee times clients using GHIN Integration where if they have an association ID with a leading zero (ex: 045), data was not coming over properly from GHIN or updating in our system.
- Fixed an issue for tee times clients using GHIN Integration that caused incorrect duplicate scores to appear on the “My Rounds/Post Scores” tab.
