

12.16.19 Release Notes

Bug Fixes

- Fixed an issue where NetCaddy Pro failed to load/connect when TLS 1.2 or higher was enabled.
- Fixed an issue with Dining Events with Special Event on Mobile/App where if the first slot of a dining event is booked, future bookings on mobile and app would not register for the event properly.
- Fixed an issue with Dining Reservations when editing an existing reservation that is inside of a block, as a Member, the time would change.
- Fixed an issue with the Stats Reports for dining that were not including Reservations with the status of “Seated”.
